# Job opening for Project Manager at Morphotonics

## *Who we are*

Morphotonics B.V. develops and sells roll-to-plate (R2P) OEM production technology for imprinting nano- or microstructures on large area substrates. Our cutting-edge technology and machines have unique features that radically improve our customers' products in the display and solar industry. We enable holographic or 3D imaging in smartphones or AR/VR displays and substantially increase the energy efficiency of solar panels. We work for innovative companies and market leaders in Silicon Valley and Asia. Working for a scale-up company means that the job is diverse, fun and challenging. This requires strong analytical skills and great teamwork. Our team members take pride in their job and get substantial responsibility toward customers in delivering what we promise.

## *Your role*

With the first systems sold and our R2P technology growing further into series of (semi-) standardized OEM products that are currently being pulled into the market by various customers, Morphotonics is now looking for an experienced project manager that can oversee and carry out the implementation of our technology at such customers. You will take responsibility and guide the whole process from start to finish and take into account possible follow-up projects. You are capable of coordinating larger projects and can translate customer demands into a feasible project planning and execution, together with the customer and a multidisciplinary project team. You will be in close contact with our customers that vary from dynamic start-ups to established multinationals and manage a smooth and successful transfer of our R2P technology to a customer's manufacturing environment.

## *Your characteristics*

- A Bachelor or Master degree in a technical field;
- Experience with project management and leading and motivating project teams;
- Excellent organization skills like structuring, planning and priority setting;
- Able to assess the feasibility of a specific customer demand and translate this into a realistic project planning;
- Experience with dealing with sub-contractors and customers of complex mechatronics systems;
- Project management skills to complete complex projects successfully up to installing and process release at customer's premises;
- Enthusiastic personality, able to work independently as well as in team settings;
- No problems with travelling abroad (10-20% of working time);
- Fluency in English;
- Excellent communication skills.

## *Our offer*

Morphotonics offers a challenging and dynamic job in an innovative environment with competitive benefits. At Morphotonics you can truly have an impact on new consumer tech products that will impact global markets and sustainability. If you are interested, please send your letter and resume to [onno.lint@morphotonics.com](mailto:onno.lint@morphotonics.com).
