

Job Opening for (Medior) Software Engineer at Morphotonics

Morphotonics B.V. develops and sells roll-to-plate (R2P) OEM production technology for imprinting nano- or microstructures on large area substrates. Our cutting-edge technology and machines have unique features that radically improve our customers' products in the display and solar industry. We enable holographic or 3D imaging in smartphones or AR/VR displays and substantially increase the energy efficiency of solar panels. We work together with innovative companies and market leaders in Silicon Valley and Asia. Working for a scale-up company means that the job is diverse, fun and challenging. This requires strong analytical skills and great teamwork. Our team members take pride in their job and get substantial responsibility toward customers in delivering what we promise.

With the first OEM systems sold, Morphotonics is now looking for a software engineer to further grow our R2P technology with the development of the next-gen OEM product. Software engineering for this machine will be in the form of greenfield application development based on requirements for future users as well as demands from customers using our current OEM systems. As our software engineer, you will take responsibility for all OEM software engineering and the specifying, developing and implementing of new features, for the sub-contracting of software services, and for having the software on our equipment running smooth in commercial operation at the customer.

Preferably you have the following characteristics:

- A Bachelor or Master degree in Computer Science, Technical Automation or in a relevant technical study that can fulfil an equivalent role.
- Experience in programming high-tech machines using OO and UML;
- Proven experience in delivering in accordance with a defined architecture;
- Experience with systems integration;
- Hands-on experience (3+ years) in working in a modern software engineering environment, using build servers, test automation platforms and version control tooling;
- Preferably, applicant has experience with the following languages and tools: C#, HTML5, Git, Jenkins;
- Experience with CI/CD and scrum are a pre;
- Enthusiastic personality, ability to work in an innovative team in a dynamic environment;
- No problems with travelling abroad occasionally (10% of working time);
- Fluent in English;
- Good communication skills.

Morphotonics offers a challenging and dynamic job in an innovative environment with competitive benefits. At Morphotonics you can truly have an impact on new consumer tech products that will impact global markets and sustainability. If interested please send your letter and resume to onno.lint@morphotonics.com.
